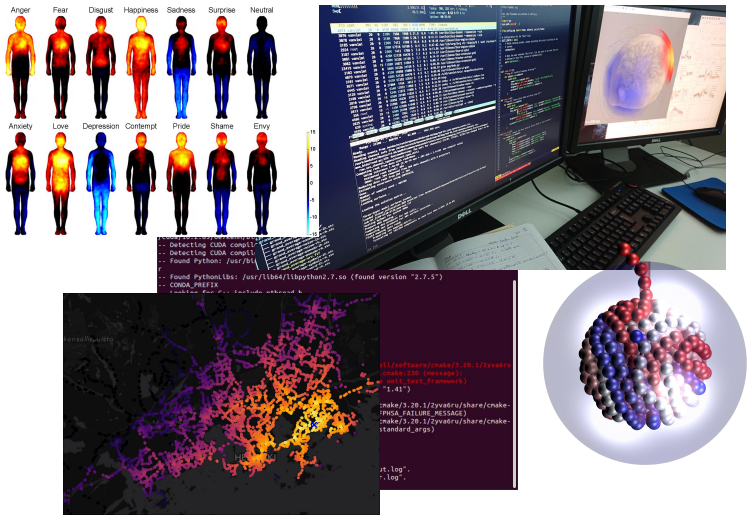
Aalto Scientific Computing:
Your local computing specialists

Almost every field uses computing, from physics to engineering to business to digital humanities

But it's hard to go from this:
A bunch of hardware and services

To this:
Useful work, research, and teaching



We are more than just your university HPC team:

HPC

Our local Triton cluster is powerful, but we also support usage of CSC and LUMI resources.

Triton's main benefits are ease of getting started, ease of use, close integration to Aalto {accounts, data storage, other systems}, ability to customize, and local support.

scicomp.aalto.fi/triton/

Scientific software dev

We can help with anything related to research code:

- Normal coding help
- Optimization
- Scaling
- GPU code, CUDA
- Planning before starting

scicomp.aalto.fi/rse/

Data

We have the large, secure, and shareable data storage for research:

- Shared spaces with access control
- Large quotas
- Network access

Common solutions:

- Triton scratch (shared)
- Triton work (personal)
- Dept project (shared)

Other resources

We don't just help with our team's infra, but can help with:

- Dept IT - we overlap with them
- CSC - National SciComp center with larger HPC resources
- Aalto IT Services: data storage, VMs, and more.
- And more...

SciComp Garage
