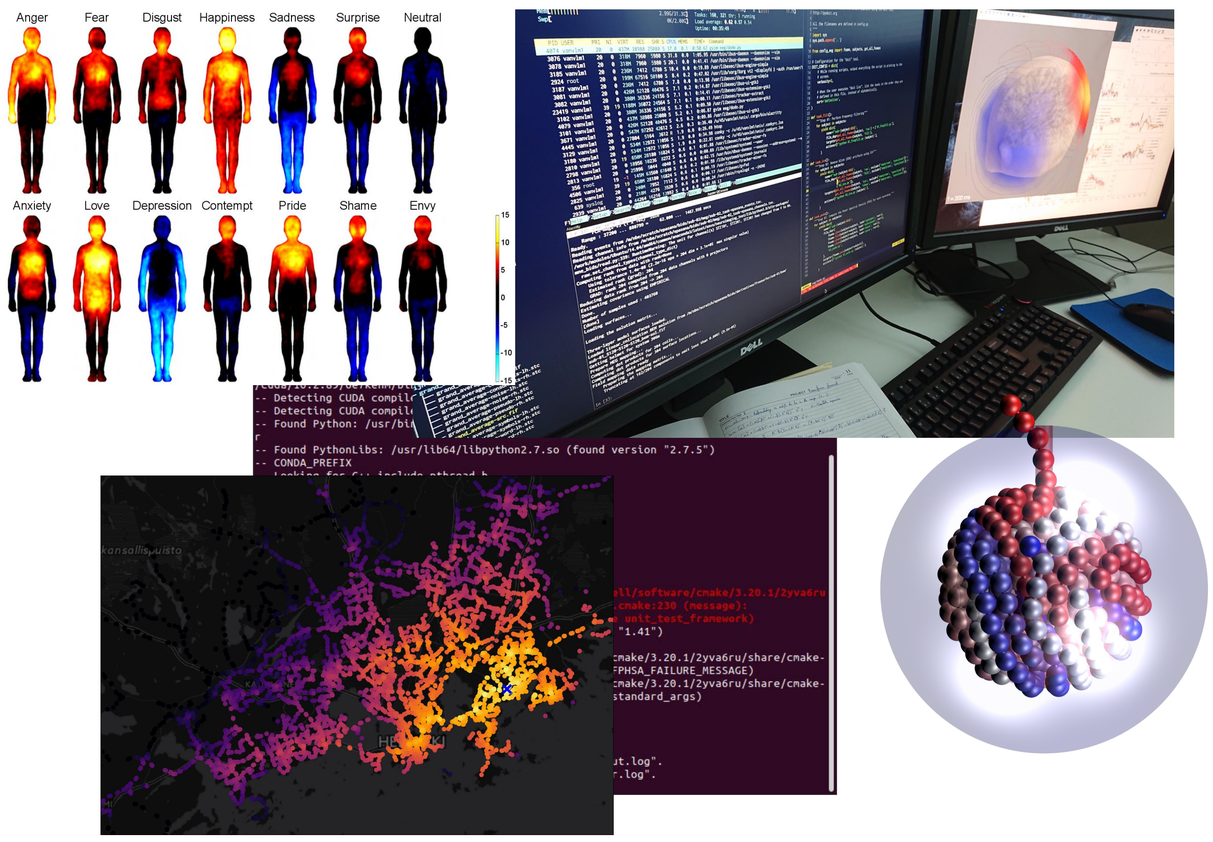
Aalto Scientific Computing:
Helping you take computational science from theory to practice

Almost every field uses computing, from physics to engineering to business to digital humanities

But it's hard to go from this:
A bunch of hardware and services

To this:
Useful work, research, and teaching



ASC, formally Science-IT, exists to make computing possible for every researcher, and to help experts get to the next level.
We do this by:

Usable services and infrastructure
We emphasize usability, not size.

Research (Software) Engineers
Specialists dedicated to making other research possible.

Human support
We support humans doing research, not hardware or infrastructure.

Data management
Storage is cheap, but keeping data organized is hard.

Software installation
We try to provide a base so that work can begin immediately.

Teaching
Practical, not academic courses.

COMPUTE SOFTWARE DATA MGMT TRAINING

DO DISTURB
I'll try to help!

SciComp Garage
scicomp.aalto.fi/help/garage/

Scientific computing isn't just for nerds.
Almost everyone needs it, and goes along with your other fields.
There are far more interesting parts than you than you might think.
